Ms. Sandra L. Otto
Division Administrator
Federal Highway Administration
700 West Capital, Room 3130
Little Rock, Arkansas 72201-3298

Re: AHTD Job Number 040486
FAP Number STP-9142(23)
College Ave. — Stone Bridge Rd.
(Hwy. 16) (Fayetteville)
Washington County
Tier Three Categorical Exclusion

Dear Ms. Otto:

The Environmental Division has reviewed the referenced project and it falls within the definition of the Tier 3 Categorical Exclusion as defined by the AHTD/FHWA Memorandum of Agreement on the processing of Categorical Exclusions. The following information is included for your review and, if acceptable, approval as the environmental documentation for this project.

The purpose of this project is to widen Highway 16 in Fayetteville from College Avenue to Stone Bridge Road. The length of the project is approximately 2.4 miles (3.9 kilometers). A project location map is enclosed.
The majority of the existing roadway has two 11-foot (3.3-meter) paved travel lanes with eight-foot (2.4-meter) shoulders. A small portion of the existing roadway already has four 11-foot (3.3-meter) paved travel lanes, and will not be reconstructed. The existing right of way varies between 80-100 feet (24-30 meters).

Proposed improvements include two 11-foot (3.3-meter) paved inside travel lanes, two 15-foot (4.6-meter) outside travel lanes, a 12-foot (3.7-meter) left turn lane as needed, 5-foot (1.5-meter) sidewalks, and curb and gutter design. The 15-foot (4.6 meter) wide outside travel lanes will allow the addition of a bicycle lane in the future. The average right of way width will vary between 100-130 feet (30-40 meters). Approximately 5.2 acres (2.1 hectares) of new right of way will be needed to complete the project.

Design data for this project is as follows:

<table>
<thead>
<tr>
<th>Design Year</th>
<th>Average Daily Traffic</th>
<th>Percent Trucks</th>
<th>Design Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009</td>
<td>12,500</td>
<td>13</td>
<td>40 mph (60 kmph)</td>
</tr>
<tr>
<td>2029</td>
<td>17,500</td>
<td>13</td>
<td>40 mph (60 kmph)</td>
</tr>
</tbody>
</table>

There are no archeological/historic sites, endangered species, prime farmlands, or Environmental Justice issues associated with this project. A clearance letter from the State Historic Preservation Officer is enclosed. Field inspections found no evidence of existing underground storage tanks or hazardous waste deposits. A Noise Analysis and Public Involvement Synopsis is also enclosed.

No wetlands will be impacted by the construction of the proposed project. The project will impact four unnamed tributaries to Town Branch and an unnamed tributary to West Fork White River. The existing structures at these crossings will be retained and extended, with the exception of a 2-foot (0.6-meter) reinforced concrete pipe at Station 572+00, that will be replaced with a triple 3-foot (0.9-meter) reinforced concrete arch structure. Construction of the proposed project will impact less than 0.5 acre (0.2 hectare) of waters of the United States and should be allowed under the terms of a Section 404 Nationwide Permit 14 for Linear Transportation Crossings as defined in Federal Register 67(10):2020-2095.

There is one residential relocation associated with the project. Public Law 91-646, The Uniform Relocation Assistance Act of 1970, as amended, will apply.
If you have any questions, please contact the Environmental Division at 569-2281.

Sincerely,

Lynn P. Malbrough
Division Head
Environmental Division

Dear Mr. McCluskey:

A Cultural Resource Survey for the referenced project is enclosed. Please review for concurrence with the findings of my staff. If you have any questions or require additional information, please contact Chris Branam of my staff at 501-569-2594.

Sincerely,

Lynn P. Malbrough
Division Head

Noise Assessment
Job 040486

A noise assessment has been conducted for this project utilizing the Federal Highway Administration’s Traffic Noise Model (TNM 2.5) procedures, existing and proposed roadway information, existing traffic data and the traffic projections for the design year of 2029. This assessment is based on the design year Leq Noise Abatement Criteria (NAC) level of 67dBA, which has been established by the Federal Highway Administration (FHWA) as the impact level for noise receptors associated with highway projects. This level or any exceedance of this level is considered a noise impact.

This project includes an urban roadway cross-section consisting of two 11-foot (3.3-meter) and two 15-foot (4.6-meter) paved travel lanes with a curb and gutter design. A 12-foot (3.6-meter) center turn lane will be constructed at selected locations.

The results of the noise assessment reveal that any noise receptor located within 141 feet (43 meters) of the proposed centerline along the proposed project location, will experience noise levels that exceed the NAC and will be considered impacted by highway traffic noise.

Seventy-one sensitive receptors located along the proposed project location are predicted to experience noise impacts resulting from noise levels that approach or exceed 67dBA during the design year. The term “approach” is considered to be one dBA less than the NAC. Sixty-two receptors are currently impacted by traffic noise through the project area, sixteen of which reside in apartments located near East Fairlane Street. An increase of only 3 dBA above current noise levels is predicted for the design year of 2029, as compared to the modeled levels for the existing design year of 2009.

Any noise abatement efforts using barrier walls or berms are not warranted for this project. This is due to the need to provide direct access to properties along Highway 16. In order to provide direct access, breaks in the barrier walls or berms would be required. These necessary highway access breaks would render any noise barrier ineffective and cost prohibitive.

To avoid noise levels in excess of design levels, any future receptors should be located a minimum of 150 feet (46 meters) from the proposed centerline of Highway 16 along the proposed project location. This distance should be used as a general guide and not as a specific rule, since the noise will vary depending upon the roadway grades and other noise contributions.

Any excessive project noise due to construction operations should be of short duration and have a minimum adverse effect on land uses or activities associated with this project area.
In compliance with Federal guidelines, a copy of this analysis will be transmitted to the Northwest Arkansas Economic Development District for possible use in present and future land use planning.
An open forum Public Involvement Meeting was held for the proposed Highway 16 widening project at the First Assembly of God Church from 4:00 p.m.–7:00 p.m. on March 31, 2009. Media news releases and flyers were utilized to inform the public of the meeting. Efforts to involve minorities and the public in the meeting included:

- Display advertisement placed in the Northwest Arkansas Times on Sunday, March 22 and Sunday, March 29, 2009.
- Public Service Announcement to EZ Spanish Media (La Zeta 95.7) that aired on Saturday, March 28 thru March 31, 2009.
- Outreach to Minority Ministers Letters.
- Distribution of flyers (English and Spanish) in the project area.

The following information was available for inspection and comment.

- Two copies of an aerial photograph display at a scale of one inch equals 300 feet, showing the location of the project.
- Two copies of a preliminary design display at a scale of one inch equals 50 feet.
- Projection of the preliminary design for detailed viewing.

Handouts for the public included a comment sheet and a small-scale map that was identical to the location map. Copies of these are attached.

Table 1 describes the results of the public participation at the meeting.

<table>

AHTD staff reviewed all comments received and evaluated their contents. The summary of comments listed below reflects the personal perception or opinion of the person or organization making the statement. The sequencing of the comments is random and is not intended to reflect importance or numerical values. Some of the comments were combined and/or paraphrased to simplify the synopsis process.

An analysis of the responses received as a result of the public survey is shown in Table 2.

<td>Does not support the project</td>
<td>3</td>
</tr>
</tbody>
</table>

Comments concerning issues associated with the proposed project were as follows:

- Giving citizens options for modes of transportation (bike lanes) makes us a healthier, economically sustainable and more livable community.
- The current design should incorporate a center turn lane by eliminating the extra lane widths for future bike lanes and providing a sidewalk along only one side of the street.
- The widening should extend past Stone Bridge Road, possibly all the way to Elkins.
- The project is not justified by the traffic levels and will only serve to increase community/environmental disruption.
- Concerns about property loss and devaluation.
- A stoplight should be added at Huntsville and River Meadows instead of the proposed location at Stonebridge and Huntsville Road.
