Method of Documentation of Acceptance:

By brand and supplier.

Beginning 1/1/2018, all material supplied shall have either the manufacturing plant or a manufacturer product identification code legibly printed on the geotextile at least every 16.3 feet (5 meters). New rolls supplied shall have a label affixed on the outer wrapping and on the inside of the roll core. If needed contact Materials Division for identification code key.

Method of Approval:

- **Geotextile Fabrics shall comply with the requirements of AASHTO M 288. The manufacturer/supplier must participate in the National Transportation Product Evaluation Program (NTPEP). The most recent NTPEP audit report and NTPEP test results for the geotextile fabric requested for approval must be supplied to the Department with the QPL submittal. NTPEP geotextile fabric test data more than four years old will not be accepted.**

- **The Department will require the manufacturer product identification code printed every 16.3 feet (5 meters) on any geotextile fabric supplied to projects. New geotextile fabric rolls shall have a least one label on the outside and one label on the inner core as required**

Geotextile Fabric

by the NTPEP Geotextile audit program.

- For each submitted geotextile fabric, the manufacturer/supplier shall designate the Arkansas Department of Transportation Type for which approval is requested. Test reports indicating compliance shall include the manufacturer/supplier's name, address, and product name of geotextile. The submittal shall include a sample of each product along with the appropriate product roll labels. The sample shall be minimum of 3 feet in length and the full width of the fabric. It shall include a clearly legible print of the manufacturing plant or NTPEP manufacturer plant identification code. A listing of any possible NTPEP manufacturer product identification codes for each product shall be supplied. Product data sheets and application procedures shall be included. Documentation pertaining to the melting point shall be submitted for geotextiles submitted for Type 7.
- If the geotextile fabric meets the designated Type requirements, a letter and unsigned certification agreement will be sent to the manufacturer. The product will be placed on the QPL upon receipt of the signed certification agreement. If the NTPEP testing is not kept current, the product will be removed from the QPL.
- Failure of the fabric either in the laboratory or in field applications is sufficient reason to reconsider acceptance of the material. Suspension of further use and/or removal from the QPL may occur pending review by the Materials Engineer.

No information contained in these lists is to be used for promotional purposes.

The manufacturer of privately labeled products must be disclosed.
